

FALL ROOFING MAINTENANCE

Fall is an important time for maintaining your roof. With cold weather just around the corner, a full inspection of your roofing system and components can locate serious defects that may cause costly leaks and premature roofing system deterioration over the winter months.

If your commercial building is not covered by our Roofing Systems Service Agreement or if you have not had an inspection this year, please contact us at **704-391-8001** or via e-mail at info@raycompany.com for a complimentary inspection and written report.

If you desire, we can also make any emergency repairs you approve for routine visually observed defects such as:

- Deteriorated, split, cracked flashings on walls, curbs and roof penetrations
- Splits and cracked parapet wall and coping joints
- Splits or ruptured blisters in modified or built-up roofs
- Holes, tears and splits on single ply roofs

These conditions, if not corrected, could lead to costly leaks and roofing system deterioration during the summer months.
